Together, they draw on the highly effective " pivotal response " approach developed at the center to provide concrete ways of improving the symptoms of autism and the emotional struggles that surround it, while reminding readers never to lose sight of the humor that lurks in the disability ' s quirkiness or the importance of enjoying your child. From the shock of diagnosis to the step-by-step work with verbal communication, social interaction, self-stimulation, meltdowns, fears, and more, the answers are here-in a book that is as warm and nurturing as it is authoritative.

More Than Words

Every parent wants to raise a bright, happy, and moral child, but until Stanley Greenspan investigated the building blocks of cognitive, social, emotional, and moral development, no one could show parents how and when these qualities begin. In this book Dr. Greenspan, the internationally admired child psychiatrist, identifies the six key experiences that enable children to reach their full potential. In *Building Healthy Minds*, he draws upon discoveries made in his research and practice as he describes the many ways in which games, fantasy play, and conversations with and without words encourage this development. No one has looked so deeply into the very earliest stages of human development, and no other book makes such vital and effective information available to every parent.

The Child with Special Needs

Based on thousands of hours of conversations with Dr. Greenspan, *The Floortime Manual* is the only systematized guide to Dr. Greenspan's Floortime Approach.

Greenspan ' s program promotes the building blocks of healthy emotional and behavioral development. He shows that, remarkably, children with ASD do not have a fixed, limited potential, and may often join their peers to lead full, psychologically healthy lives. The Floortime approach can also be applied at any age--including early infancy, when the first signs of risk for ASD may appear--so that preventing the full development of autism becomes a real possibility.

Dr. Stanley Greenspan explains that the roots represent how children take in the world through what they hear, see, smell, and touch. The trunk represents thinking skills through which children grow both academically and socially. From these, the branches-children's basic abilities to read, write, do math, and organize their work-develop. Both parents and early learning professionals will especially welcome the sections on finding and solving learning problems early. With Dr. Greenspan's characteristic wise optimism, this book "raises the ceiling" for all children who learn differently or with difficulty.

LEARNING THROUGH PLAY One of the best ways for children with autism, Asperger's, and sensory processing disorders to learn is through play. Children improve their motor skills, language skills, and social skills by moving their bodies and interacting with their environment. Yet the biggest challenges parents, teachers, and loved ones face with children on the autism spectrum or with sensory processing disorders is how to successfully engage them in play. Pediatric occupational therapist Tara Delaney provides the answer. In *101 Games and Activities for Children with Autism, Asperger's, and Sensory Processing Disorders*, she shows you how to teach your children by moving their bodies through play. These interactive games are quick to learn but will provide hours of fun and learning for your child. And many of the games can be played indoors or outdoors, so your child can enjoy them at home,

An Early Start for Your Child with Autism

What do babies and young children really need? For the first time, two famed advocates for children cut through all the theories, platitudes, and controversies that surround parenting advice to define what every child must have in the first years of life. They lay out the seven irreducible needs of any child, in any society, and confront such thorny questions as: How much time do children need one-on-one with a parent? What is the effect of shifting caregivers, of custody arrangements? Why are we knowingly letting children fail in school? Nothing is off limits. This short, hard-hitting book, the fruit of decades of experience and caring, sounds a wake-up call for parents, teachers, judges, social workers, policy makers-anyone who cares about the welfare of children. The Functional Emotional Assessment Scale (FEAS) for Infancy and Early Childhood

In a book likely to transform how parents manage many of their child's daily struggles, Drs. Smith and Gouze explain the central and frequently unrecognized role that sensory processing problems play in a child's emotional and behavioral difficulties. Practicing child psychologists, and themselves parents of children with sensory integration problems, their message is innovative, practical, and, above all, full of hope. A child with sensory processing problems overreacts or underreacts to sensory experiences most of us take in stride. A busy classroom, new clothes, food smells, sports activities, even hugs can send such a child spinning out of control. The result can be heartbreaking: battles over dressing, bathing, schoolwork, social functions, holidays, and countless other events. In addition, the authors say, many childhood psychiatric disorders may have an unidentified sensory component. Readers Will Learn: The latest scientific knowledge about sensory integration How to recognize sensory processing problems in children and evaluate the options for treatment How to prevent conflicts by viewing the child's world through a "sensory lens" Strategies for handling sensory integration challenges at home, at school, and in twenty-first century kid culture The result: a happier childhood, a more harmonious family, and a more cooperative classroom. This thoroughly researched, useful, and compassionate guide will help families start on a new path of empowerment and success.
