Jules Verne's classic 1864 sci-fi novel tells the story of German professor Otto Lidenbrock who believes there are volcanic tubes going toward the centre of the Earth. He, his nephew Axel, and their guide Hans descend into the Icelandic volcano Snaefellsjökull, encountering many adventures, including prehistoric animals and natural hazards, before eventually coming to the surface again in southern Italy, at the Stromboli volcano. Journey has been read by millions of inquisitive minds and has influenced some of the world's most famous explorers such as Admiral Byrd, who announced on his 1926 expedition to the North Pole that "it is Jules Verne who is bringing me." Renowned cave explorer Norbert Casteret said in 1938 that A Journey to the Center of the Earth was a "marvelous book which impressed and fascinated me more than any other. I have re-read it many times, and I confess I sometimes re-read it still, each time finding anew the joys and enthusiasm of my childhood." When Professor Lidenbrock discovers coded messages about a passage to the center of the Earth in an old manuscript, he decides to undertake the adventure of a lifetime and travel through the volcanic passage described in his research. Accompanied by his nephew Axel and their Icelandic guide, he undertakes a fantastic journey, encountering unimaginable environments, terrible obstacles and strange creatures along the way. Journey to the Center of the Earth is one of Jules Verne's most renowned works of science-fiction. It was inspired by Geological Evidences of the Antiquity of Man by Charles Lyell, which discusses the origin of humans through geological discovery. Verne's novel has been adapted numerous times for film, television and theatre, including

Everybody knows that the Internet is the most powerful information network ever conceived. It is a gateway to information, a messenger of love and a fountain of riches and distraction. We are all connected now, but connected to what? In Tubes, acclaimed young journalist Andrew Blum takes readers on a fascinating journey to find out. As Blum writes, the Internet is tangible: it fills buildings, converges in some places in the world and avoids others, and it flows through tubes—along train lines and highways, and under oceans. You can map it, smell it and see it. As Tom Vanderbilt does in his bestselling Traffic, Blum goes behind the scenes of our everyday lives and combines first-rate reporting and engaging explanation into a

'If ever a human foot is to tread the Pole, it must be a British one!' First Mate Shandon receives a mysterious letter asking him to construct a reinforced steamship in Liverpool. As he heads out for Melville Bay and the Arctic labyrinth, a crewman reveals himself to be John Hatteras, and his lifelong obsession, the Pole. Despite experiencing appalling cold and hunger, the captain treks across the frozen wastes in search of fuel. Abandoned by his crew, Hatteras remains without resources at the coldest spot on earth. How can he find food and explore the Polar Sea? And what will he find at the top of the world? This new translation by the father of Verne Studies brilliantly conveys the hypnotic mood and gripping authenticity of Verne's second novel. This edition also includes the original, censored ending, previously unpublished chapters, and evidence of Verne's plagiarism.

This, the first part of an adventure to surpass all adventures, takes you to the near, possible, future, to the far edges of hope and mankinds dreams. Why are we here and what are we to this vast universe that embraces us so tightly. An attempt to realize this is the bulk of this work. We begin with the near future of space commerce. We will seek material value in space, of course. We have and certainly will find great wonderment as we explore this new wilderness left to us by chance or divinity? This is the question we, secretly, seek most. Out past Mars, in the asteroid belt that encircles our sun, a scab mining ship picks out an asteroid to dig for what valuables it may contain. This orbiting mountain of rock is, as it turns out, a very exceptional find. Our mining crew of seven set out for normal operations, but normal is not to be. They are being watched by a hostile group of strict union bonded spacers looking to pirate our barely virtuous heros. War between the factions involved, is but a minuscule mistake away, as always and the find made by the scab crew will change mankinds space capabilities forever. Join the adventure and experience the real hazards that humankind will endeavor to take possession of our new and open wilderness.

Journey to the Center of the Earth

Journey to the Center of the Earth was published in 1864. Verne was fascinated with the northern and southern poles of Earth and as Arctic exploration was in its infancy in the mid-19th century, the unknown north was an ideal setting for the imaginative forays of science fiction, a new literary genre. Northern exploration was in the news and Verne was inspired to write a novel based on the premise that the center of the Earth is hollow. This annotated edition includes a biography and critical essay.

"In the warm atmosphere of Jelena's texts, as if held in a warm motherly embrace, we will gain a better understanding of what we thought was the truth about ourselves and the world. Jelena takes us on a path of more humane living in a competent way, eliciting not only approval but trust above all else. One can not learn from a single book, but this is not a textbook, it is a tool for adjusting our dysfunctional life maps. Which is why we shall keep this book on our bedside table and recommend it to all those we love." Ljiljana Jerinić, psychologist and TA counselor"Jelena's book Journey to the center of the heart is a gift. So simple to read yet so competent. The perfect choice for a gift to ourselves, as well as all those we love and care for. In a world full of negativity, bad news and dark premonitions, Jelena was brave enough to write about what's beautiful, positive and cheerful. But certainly not about what's easy. She was brave enough to write about vulnerability, imperfections and weaknesses, which actually represent our

greatest strengths, once we admit them to ourselves and then to others, too. These texts win us over with the charm of imperfection, the power of truth and love. This is a book that will be read for years to come, and will never be outdated. On the contrary, it will be a necessity for ordinary people learning how to love life and everything that comes with it, learning the most important skill of all along the way - self-love. Jelena knows the way. I trust her." Žana Erdeljan, psychologist"Using Transactional Analysis and Gestalt as a framework, along with beautiful examples from everyday life, Jelena explains in simple terms and offers applicable advice which aids us in understanding and applying our own emotional intelligence as well as enhancing it. This book enables us - in a highly competent yet loving way, relying on the close relationship between author and reader - to realize that understanding emotions plays a key role when it comes to our mood, making the right decisions, motivation, resourcefulness and adaptability to all of life's challenges." good story. Take a Journey Through the Impossible and you might see another side of the Father of Science Fiction.- WSFA Journal (Washington Science Fiction Association) Translated by Edward Baxter Introduction by Jean-Michel Margot, President of the North American Jules Verne Society Original Artwork by Roger Leyonmark Jules Verne, the most translated novelist in the world and best known for books such as *Twenty Thousand Leagues under the Seas* and *Around the World in Eighty Days*, was also a prolific playwright. *Journey Through the Impossible*, a play of fantasy and science fiction, ran for 97 performances in Paris in 1882 and 1883. In the three acts, the characters go first to the center of the Earth, then under the sea, and finally to the planet Altor. Characters from *Twenty Thousand Leagues under the Seas*, *From the Earth to the Moon*, *Doctor Ox*, and *Journey to the Center of the Earth* appear again in *Journey through the Impossible*, including Captain Nemo, President Barbican, Michel Ardan, Doctor Ox, and Professor Lidenbrock. Verne wrote this play in the middle of his life, between his optimistic (science helps humanity and is good) and pessimistic (science is dangerous and bad) works; the play is a vehicle for Verne to ask himself and his readers whether science, technology, and the pursuit of knowledge are good or bad. He used the play to pose questions about life and wisdom that are still important in our time. The script of the play was lost to Verne scholars for almost a century, until the text was discovered in 1978 in the Archives of the Censorship Office of the Third French Republic and was published in French in 1981. The play had many reviews in 1882 and two of them are included here to give the reader

insight into how the play was staged in Paris in the second half of the 19th century. Also included are many wonderful illustrations showing set designs for the original play, a page from a lost scene, the original frontispiece, and other interesting details. This is the first complete edition and the first English translation of a surprising work by a popular French novelist whose works continue to delight readers and audiences to this day.

Journey to the Center of the Theater

The journey to the centre of the earth is a voyage like no other we can imagine. Over 3,000 km below the earth's surface an extraordinary inner world the size of Mars awaits us. Dive through the molten iron of the outer core and eventually you will reach a solid sphere - an iron-clad world held within a metal sea and unattached to anything above. At the earth's core is the history of our planet written in temperature and pressure, crystals and minerals . . . Our planet appears tranquil from outer space. And yet the arcs of volcanoes, the earthquake zones and the auroral glow rippling above our heads are testimony to something remarkable happening inside . . . For thousands of years these phenomena were explained in legend and myth. Only in recent times has the brave new science of seismology emerged. One hundred and fifty years after the extraordinary, imaginative feat of Jules Verne's JOURNEY TO THE CENTRE OF THE EARTH, David Whitehouse embarks
